1. Introduction

In today's fast-paced IT industry, professionals are expected to continuously learn, upgrade their technical skills, and apply concepts in real-world scenarios. However, busy

schedules, remote locations, and limited availability of convenient time slots often become major barriers to hands-on implementation. This challenge extends to students as well, especially in IT education, where technology evolves rapidly.

Fortunately, technology itself provides a solution!

At **Aptech**, we are committed to leveraging technology in our training model. To revolutionize the way students learn and apply concepts, we introduce **eProject**—a **structured, and interactive learning environment** designed to simulate real-world project implementation

2. System Requirements

To ensure the application runs smoothly, your environment should meet the following minimum specifications:

Hardware

- ☐ Intel Core i5/i7 Processor or higher
- ☐ 8 GB RAM or above
- ☐ Color SVGA
- ☐ 500 GB Hard Disk space
- ☐ Mouse
- ☐ Keyboard

Software

Technologies to be used: [Choose as per Course/Semester]

Frontend: HTML5, CSS3, Bootstrap, ReactJS 18 or higher/AngularJS/Angular 9 or higher, JavaScript, jQuery, and XML

Backend: Java 16 or higher (with Apache NetBeans or Eclipse), Java EE 7 or

higher/Jakarta EE 9 or higher or C# 7.2 with ASP.NET MVC and ASP.NET MVC Core

(optional), Visual Studio 2019 or higher or PHP 7.2 or higher with Laravel Framework or

Python 3.0 or higher with Flask or Django

Database:MySQL 8.0 or higher/SQL Server 2019 or higher

3. Installation & Setup

Follow these steps to deploy the application on a local development environment (e.g., using XAMPP/WAMP or Laravel Valet):

Step 1: Clone the Source Code

Open your terminal and clone the repository:

```
Bash git clone
```

```
https://github.com/tuanpham1993-gif/ProjectReact
```

Step 2: Install Dependencies

Install backend and frontend packages:

```
Bash composer install npm  
install && npm run build
```

Step 3: Environment Configuration

Copy the example environment file and generate an application key:

```
Bash cp.env.exampleenv  
php artisan key:generate
```

(Note: Open the `.env` file and update your database credentials such as `DB_DATABASE`, `DB_USERNAME`, and `DB_PASSWORD` if you are using MySQL).

Step 4: Database Migration & Seeding

Initialize the database and populate it with default sample data (Admin, Agent, Customer):

```
Bash php artisan migrate --seed
```

Step 5: Run the Application

Start the local development server:

```
Bash php artisan serve
```

Access the application in your web browser at: `http://127.0.0.1:8000`

4. Getting Started

CourierXpress uses a secure authentication system to direct users to their respective dashboards based on their assigned roles.

- **To Register:** Click on the "**Register**" button on the top navigation bar. Fill in your Name, Email, and Password. By default, new users are registered as **Customer**.
- **To Login:** Click on the "**Login**" button and enter your credentials. The system will automatically route you to the appropriate portal (Admin Dashboard, Agent Dashboard, or Customer Portal).
- **Forgot Password:** Click "Forgot Your Password?" on the login screen to receive a secure reset link via email.

5. Role-Based User Instructions

5.1 Public / Guest Users

Guest users can browse the public-facing sections of the application without an account:

- **Home Page:** View the latest news, Our Achievements, and Our Services.
- **About Us & Contact Us:** Learn about Informations and send inquiries directly to the support team using the Contact Form. Patients

Customer are the primary service consumers. Upon logging in, you can perform the following actions:

- **Update Profile:**
 1. Click your name on the top right and select **Account Settings**.
 2. Update your Full Name, Phone Number, and Address.
 3. Navigate to **Security Settings** to change your password safely.
- **Booking Shipments:**
 1. Click **Create Shipment** on the side bar.
 2. Fill all fields requirements: **sender and reciever informations, types of express, date, shipment details**.
 3. Click **Create Shipment** to complete your boooking
- **Manage Shipments:**
 1. Navigate to **My Shipments**.
 2. View the status of all your bookings (Confirmed, Pending, In transit, Delivery, or Cancelled).
 3. To cancel a shipment, click the **Cancel Booking** button (Note: Only available when the shipment status is Pending).

5.2 Agents

Agents act as service providers. Logging in routes you directly to the **Agents Dashboard**:

- **Assignment Shipments:**
 1. **View** and **Update** status of shipments
- **Notifications:**
 1. Receive Admin messages

5.3 Administrators

Administrators are the governors of the system. Logging in routes you to the **Admin Dashboard**:

- **Statistics & Reports:** View real-time metrics including Total Shipments, Completed/Cancelled/Pending statuses, Total Customers, and Agents.

- **Branchs Management:**

1. Navigate to the **Branches tab**.
2. Add new branch, update or delete existing ones from the system master data.

- **Customer Management:**

1. Navigate to the **Customer** tab.
2. View all registered accounts. You can **View** histories shipments of all Costomer.

- **Agent Management:** Add, Edit, View all registered Agents profiles. Admins have the authority to delete doctor profiles if necessary.

- **Invoices Management:**

1. Navigate to the **Invoices** tab.
2. View and Print invoices of Shipments

- **Reports and Analytics Management:**

1. Navigate to the **Reports and Analytics** tab.
2. View and Export the report by Days, City and Branch

- **Notifications Management:**

1. Navigate to the **Notifications** tab.
 2. View , Edit, Delete and Add new Notifications Templates
-
